PROFESSIONAL SUMMARY

Senior Software Engineer with 4+ years of experience building low-latency, high-throughput backend systems for fintech and capital markets. Core expertise in Java, Spring Boot, microservices, REST APIs, market-data processing, AWS, Kafka, MongoDB, Elasticsearch, SQL, and observability. Delivered sub-500-microsecond exchange-feed parsing, revenue-generating trading features, and scalable portfolio-processing pipelines while consistently improving production reliability, compliance, and engineering quality.

TECHNICAL SKILLS

Languages	Java · Python · SQL · JavaScript
Backend & Architecture	Spring Boot · Node.js · REST APIs · Microservices · Distributed Systems · Low-Latency Systems · Parallel Processing · MapReduce
Cloud, Data & Messaging	AWS (EMR, Lambda, S3, SQS, SNS, CloudWatch) · Kafka · MySQL · MongoDB · Elasticsearch
DevOps & Observability	Docker · Kubernetes · Jenkins · CI/CD · Git · DevSecOps · Prometheus · Grafana · Load Testing · Monitoring & Alerting
Domain & Tools	Fintech · Capital Markets · Market Data · Multicast · Order Management Systems · Jira · Swagger/OpenAPI

PROFESSIONAL EXPERIENCE

Senior Software Engineer (SDE-2)

Dec 2024 – Present

HDFC Securities · Bengaluru, India

- Contributed to developing and integrating an in-house feed multiplexer and parser that directly consumes exchange market data, reducing third-party vendor dependence and costs while improving speed and reliability.
- Built SKY REST APIs for trading signals and technical indicators, enabling revenue-generating product capabilities and supporting customer acquisition.
- Architected and delivered a buyback order management system, adding a new transaction category to the core trading platform.
- Engineered a daily AWS EMR portfolio-processing job using MapReduce and parallel compute to calculate mutual fund holdings, returns, and XIRR at scale.
- Automated expired-scrip cleanup across watchlists, recently viewed securities, price alerts, and GTT orders, eliminating manual database maintenance and stale records.
- Standardized application monitoring, proactive load testing, and compliant release checks across customer-facing services using CloudWatch, Prometheus, system metrics, and error logs.

Software Engineer → Senior Software Engineer

Feb 2024 – Dec 2024

Paytm Money · Delhi, India

- Built a live market-data feed parser for multiple exchanges that achieved packet-processing latency below 500 microseconds, delivering near-real-time prices to customers.
- Developed a multicast traffic circuit-breaker microservice with automatic failover switching to strengthen market-data availability.

- ▶ Created a centralized monitoring and alerting platform that consolidated Prometheus, AWS CloudWatch, and service telemetry across teams.
- ▶ Maintained and enhanced 10+ microservices, handling routine upgrades, production readiness, and incident support.

Software Developer

Jun 2022 – Feb 2024

One97 Communications (Paytm) · Noida, India

- ▶ Led backend development for the Bonds IPO platform using Java, Spring Boot, microservices, and REST APIs, creating reliable digital investment workflows.
- ▶ Built an AWS Lambda workflow that generated default watchlists daily, supporting user onboarding and engagement at scale.
- ▶ Delivered the pinned-stocks widget for the Paytm homepage using Elasticsearch, extending investment discovery into the wider Paytm ecosystem.
- ▶ Maintained IPO, Sovereign Gold Bond (SGB), and Watchlist services; integrated AWS S3, SQS, SNS, Kafka, MySQL, MongoDB, and Elasticsearch.

Backend Developer Intern

Jan 2022 – Jun 2022

Paytm Money · Noida, India

- ▶ Contributed to backend services for international equities using Java, Python, and AWS; collaborated across teams to troubleshoot issues and deliver features.
